

Vertical Service Codes (Star Codes)

Using Vertical Service Codes or Star Codes can give a user quick access to a number of features and toggle controls. These features include forwarding calls, setting status, and call management options like monitor and barge. These codes are entered on a phone's keypad.

List of Codes

<u>EXTENSION STATUS CODES</u>

<u>FORWARDING CODES</u>			
Code Description	Code	Confirmation Tone	Action
Initialize Dual Ring Forward	*71+10digitnumber (*71xxxxxxxxxx)	2-tone ascending	Forward calls to the number entered. The extension will continue to ring with inbound calls.
Enables Dual Ring Forward to the last forwarding number used by the extensions	*71	2-tone ascending	Forward calls to the last number specified for forwarding. The extension will continue to ring with inbound calls.

Initialize forward	*72+10digitnumber (*72xxxxxxxxx)	2-tone ascending	All calls are forwarded to the number entered.
Enables forwarding to the last forwarding number used by the extensions	*72	2-tone ascending	All calls are forwarded to the last number specified for forwarding.
Disable forwarding	*73	2-tone ascending	Ends forward. The extension now receives all calls directed to it.

NOTE

Unless listed above by default a 2-tone ascending is confirmation of toggle on, 2-tone descending is confirmation of toggle off, 3-tone ascending is an error or an already set to that position tone.

Dialing Permissions

If you are having trouble using these codes, please make sure your extension has permissions by going to Control Panel > Extensions > Your Extension > Edit Permissions. > Dialing Permissions. Here you will find checkboxes for the various Star Code your extension is allowed to use, to enable, simply check the box next to the code you want to use and hit submit to enable it.
