

Provisioning a Yealink W76P Wireless Phone

Use this guide to add a Yealink W76P wireless phone and provision it for you with NocTel

Adding a Yealink Extension

1. From the control panel, click on **Extensions**.

2. Then click on the **Add a New Extension** link.

3. The following screen will present a selection of extension types. Locate the **Yealink Device** and click **Add Device**.
4. Enter the device's MAC address from the base unit in the **Device MAC** field.
5. Give the new extension a number and name in the provided fields.
6. Click **Submit**.

Provisioning a Yealink Extension

1. Connect the Yealink base to power and an active network connection.
2. On the handset, press **OK** (center arrow pad) > **Status** > **Base**. Scroll down and note the **IPv4 address**.
3. In a browser, navigate to the IP address.
4. Login with the default username (**admin**) and default password (**admin**)
5. Navigate to **Setting** > **Auto Provision**
6. Set the Server URL to <https://nocstel.com>
7. Click the **Auto Provision Now** button.

Handset PIN

The default handset PIN is **0000**
