

# Hosted Voice Over Internet Protocol Contracts

Hosted VoIP solutions host a client's PBX (Private Branch eXchange) at an offsite location in order to offer a single, manageable platform that makes workflow cohesive and more effective. Hosted VoIP providers take care of all the set-up and installation of the VoIP, meaning that your institution does not need to be a VoIP expert in order to get the services and products of easy-to-use internet based telephone services.

## Contract Features

---

### Budget Friendly

Your hosted VoIP system can be tailored to work with your budget. After installation, monthly service fees are low, and the most recent patches and updates are provided free-of-charge.

### Simple and Reliable

On-premise infrastructures can be costly and complicated. Cloud-hosted VoIP solutions provide an offsite location that house your organization's PBX centers your service provider handles system maintenance, upgrades, and operational issues.

### Scalable Functionality

Hosted VoIP is ideal for the a broad range of institution sizes. Hosted solutions grow and shrink with your institution, and your provider will not impose costly fees to make those changes.

## Purchasing Options

---

OETC holds RFP-backed contracts with three hosted VoIP providers: Noctel, Ednetics, and Jive Communications.

### Noctel

Cory Schruth  
(503) 764-4327  
cory.schruth@noctel.com
